

## Estimation and Prediction

**Estimation** is a rough measurement of the value, size, number, or amount of something.

**Prediction** is a statement or a guess about something that will occur in the future.

### Try practicing estimation!

"I think there are approximately 15 green triangles in this jar."

"I think it will take 10 minutes to sort the shapes in the jar."

### Try practicing prediction!

Flip a coin and guess whether it will fall on heads or tails.

Roll a dice and guess which number it will land on.
